Dear NEWS and Weather Experts, Reporters AND Professionals,

As you may know, several tornadoes did simultaneously descend on the USA Zip code = 45405 on Memorial day.

My home - located in the affected area - was not damaged; However, some of my neighbor's homes were destroyed.

Many large trees were uprooted. YOUR station coverage has been excellent!

I am writing today - to alert you to please warn your viewers of a danger that lurks - even after the tornadic event sub-sides.

That is: As neighbors rush forth - to help their neighbors - they should be made aware of the particle debris [that] is present in the ambient air; which, although to small to see - can be breathed in by human lungs.

In fact, I assisted my neighbors with tornado debris removal - and, my efforts (we theorize) resulted in me being subsequently diagnosed and treated for pneumonia.

I am much improved as I write this - as a result of the treatment [I received] from my Medical Doctor - Lizbeth Bible.

Indeed, there was a high incidence of persons - in the 45405 area - contracting "air-borne" illnesses - which may have been prevented - IF, we had worn "masks". Thus, I stated - to DR. Bible that I would request you - to please caution your viewers and ALL "helpers" to wear face - and breathing masks - during their efforts to help others. That is, particulate matter - suspended in the air - in the vicinity of a tornadic event - can become embedded - in the lining of human lungs - and, result is severe chest area infections.

THANK YOU. Please caution your viewers to wear: foot, eye, hand and **breathing** protections.
